

Software for diagnostic or therapeutic purposes is regulated as a medical device. Yet despite validation and verification requirements, **nearly 25% of device recalls are due to software failures**. The process of translating software into multiple languages comes with a specific set of risks that must be carefully controlled to ensure patient safety in all overseas markets. TransPerfect Medical Device Solutions offers a full-lifecycle solution for software localization, from ISO 13485/14971-certified linguistic verification processes to comprehensive testing services covering all process phases—including plans and cases, bug tracking and resolution, and customized documentation.

 <p>TEXT EXPANSION/ TRUNCATION</p>	 <p>EXTERNALIZATION OF STRINGS</p>	 <p>INCORRECT TRANSLATIONS</p>	 <p>CHARACTER ENCODING/ FONTS</p>	 <p>LOCALE ISSUES</p>
